**You
won't
believe
an RGB
laser
projector
can be
so small
and
so bright**

INCREDIBLY COMPACT

The new Colorburst is a complete full-color RGB projector the size of a shoebox. It is perfect for studio use, client previews, small- and medium-sized shows and for airline carry-on. Just plug it in to a standard wall outlet (either 110 or 220 VAC), connect it to any ILDA-compatible laser show controller, and instantly start doing professional shows.

BETTER OPTICS MAKE BRIGHTER BEAMS

You'll be amazed at how bright graphics and beams appear. Users say its TEM₀₀ beam is brighter and tighter than a 300 mW air-cooled RGB krypton laser, and that it holds its own even against a 1-watt RGB system with fat multi-mode beams.

DESIGNED FOR ENTERTAINMENT

The Colorburst is custom-designed for laser displays by renowned laser engineer Casey Stack. It combines 635 nm direct modulated laser diodes for red, with a cost-effective PCAOM-modulated argon laser for blue and green. The color balance is optimized for entertainment. One user said it had "better colors than any RGB laser under \$150,000."

PROFESSIONAL FEATURES

Stack also designed the projector section using top-quality components from Cambridge, MediaLas and NEOS. It has professional features: adjustments can be made without opening the projector, and recessed controls protect switches and connectors from being bumped or broken.

INCLUDES LUMIA EFFECT WHEEL

The Colorburst does graphics, beams and rotating lumia. The optional EFX-5, co-developed with noted laserist Steve Heminover, adds ILDA/DMX-controlled scan-through effects.

DEVELOPED BY EXPERTS

Manufacturing is done by Lumalaser, an established Hollywood special-effects supplier. Sales, service and support are by NewAje Lasers, whose extensive show experience guided the design.

AVAILABLE NOW!

The Colorburst is field-tested and is ready to go. You can catch it in action at ILDA 2002 in Orlando. For more details, visit www.lumalaser.com, or call NewAje at +1-818-889-7435.
